

A07 - Crafting Reports

Yue Zhang

Spring 2023

Contents

Objectives:	1
Directions	1
Task 1 - Basic Markdown	1
Task 2 - Import packages and data, suppressing messages	2
Task 3: Creating tables	2
Task 3: Plots	4
Task 4: Knit and submit.	5

Objectives:

1. More practice with R code chunk options
2. Gain proficiency with figures, tables (w/**Kable**) table of contents, etc.
3. Debugging knitting issues

Directions

1. Rename this file `<FirstLast>_A07_CraftingReports.Rmd` (replacing `<FirstLast>` with your first and last name).
2. Change “Student Name” on line 3 (above) with your name.
3. Work through the tasks, **creating code and output** that fulfill each instruction.
4. Be sure your code is tidy; use line breaks to ensure your code fits in the knitted output.
5. Be sure to **answer the questions** in this assignment document.
6. When you have completed the assignment, **Knit** the text and code into a single PDF file.
7. **Be sure that you also commit and push your final Rmd document to your GitHub account.**

Task 1 - Basic Markdown

Create a table below summarizing the metadata of the EPA Air Quality data. The first column will be the metadata attribute item name: “Source”, “Date”, and “Filename”. And the second column will include the metadata values: “EPA Air Quality SYstem (AQS)”, “2018-2019”, and “EPAair_O3_PM25_NC1819_Processed.csv”. The first column should be aligned to the right and the second to the left.

Attribute	Item Name	Values
	Source	EPA Air Quality System (AQS)
	Data	2018-2019
	Filename	EPAair_O3_PM25_NC1819_Processed.csv

Task 2 - Import packages and data, suppressing messages

Set the following R code chunk so that it runs when knit, but no messages, errors, or any output is shown. The code itself should be displayed.

```
#Import libraries
library(tidyverse);library(lubridate);library(here);library(knitr)

#Import EPA data (from the processed_KEY folder) & fix dates
epa_data <- read.csv(
  here("data","processed_KEY","EPAair_O3_PM25_NC1819_Processed.csv"),
  stringsAsFactors = TRUE) %>%
  mutate(Date = ymd(Date))
```

Task 3: Creating tables

Set the following R code chunk to display two tables, using knitr's `kable()` function, one listing the mean PM2.5 concentrations for each county, and the other the same except for Ozone. The titles should be "Mean Particulates (2.5mm)" and "Mean Ozone", respectively. And the column names should be "County" and "µg/m3" for both tables.

Customize the chunk options such that the code is run but is not displayed in the knitted document. The output, however, should be displayed.

TIPS:

- Use " $\mu\text{g}/\text{m}^3$ " as a column name to generate a nicely formatted string via markdown/MathJax notation
- If your output table spans across two pages, try inserting a new line (via `\newpage`) in the markdown just before your code chunk.

Table 2: Mean Particulates (2.5mm)

	County	$\mu g/m^3$
1	Haywood	13.98400
2	New Hanover	15.60681
3	Avery	18.27941
4	Edgecombe	26.06503
5	Pitt	27.37166
6	Guilford	29.14163
7	Swain	30.62780
8	Johnston	33.02695
9	Durham	33.53770
10	Mecklenburg	33.63038
11	Forsyth	35.09282
12	Wake	37.45423

Table 3: Mean Ozone

	County	$\mu g/m^3$
1	Swain	35.58367
2	Avery	38.39308
3	Wake	38.61345
4	New Hanover	39.11688
5	Edgecombe	39.22154
6	Johnston	40.33849
7	Mecklenburg	40.45746
8	Durham	40.69882
9	Pitt	41.64147
10	Forsyth	44.02352
11	Haywood	44.75049
12	Guilford	45.86681

Task 3: Plots

Create two separate code chunks that create boxplots of the distribution of Ozone levels by month using, one for only records collected in 2018 and one for records in 2019. Customize the chunk options such that the final figures are displayed but not the code used to generate the figures. In addition, the plots aligned on the left side of the page and set the figure heights so both plots fit on the same page with minimal space remaining. Lastly, add a `fig.cap` chunk option to add a caption (title) to your plot that will display underneath the figure.

Figure 1: Distribution of Ozone

Task 4: Knit and submit.

Add a table of contents to your document and knit to a PDF. Submit your PDF to Sakai, but also be sure to commit and push your Rmd file used to create this knit document to GitHub. In the section below, add a link to your GitHub repository.
